The entire mill had to be located in a single one-story building approximately 400 m. long and 100 m. wide. The building was divided into five or six sections where the shops were supposed to be located. Each section had a special part with several rooms to serve as shop management offices. The building was provided with a glass roof which gave excellent light inside.

In August and September 1951, the machinery for this mill started to arrive by rail. I do not know what type of machines they were or where they were shipped from.

According to the size of the

mill building and my experience acquired in other plants, I guess that it would probably employ 3000 to 4000 workers.

The Textile Construction Combine was occupied at the same time with the construction of a large workers' settlement adjoining the mill 25X1X building. [they were working on about six two-story apartment houses of 30 rooms each, each story with one kitchen. These houses were supposed to be billets for single workers. Eventually, the housing project had to be extended, providing billets for approximately 1000 single workers and several hundred workers with families.

SECRET

-3-

- 8. Construction combine workers received the following monthly salaries:
 - a. Qualified workers who were concrete workers, bricklayers, and metal assembly workers from the Fifth to Seventh Group, up to 900 rubles.
 - b. Qualified workers of the same branches in the Fourth Group, up to 600 rubles.
 - c. Apprentices in the Second Group, 250 rubles.
 - Unqualified workers (excavators and helpers in other branches)
 up to 400 rubles.
- 9. Working time for combine construction workers was eight hours daily from 0800 to 1700 hours with a one-hour break for dinner. Work was conducted on a six-day weekly basis with Sunday free. There was almost always a possibility of doing some overtime work, especially for qualified workers, providing, of course, that the whole brigade agreed to perform the overtime work. Welders, beam workers, and reinforced concrete workers were even able to work overtime individually. Overtime work was paid for at the normal rate of piece work plus two

- 10. The Textile Construction Combine workers lived either in private quarters in Chimkent or in wooden barracks which were constructed by the combine to accommodate workers who had no quarters in town. These were one-story barracks of the type of workers' dormitories. I do not remember what was the monthly rent in these dormitories.
- 11. There was a workman's kitchen with a small mess hall where a dinner consisting of a bowl of soup and a meatless second course (mashed and home-fried petatoes, spaghetti, or cabbage) with 200 gm. of black bread cost approximately five rubles.
- 12. As a detail I would like to mention that in the Textile Construction Combine there was also a group of Greek workers. I heard that the Soviet Government after World War II had resettled a large number of Soviet citizens of Greek origin from the Black Sea Coast to Southern Kazakhstan. A large group consisting of several hundred of these Greeks were sent to Chimkent. Their Soviet passports were taken away and they were restricted in their movements to the three-kilometer
